Mohamed Nadjib Taleb

IT Support & Infrastructure Administration · Windows Systems · Network Security

+213-549-845-630 · mn.taleb@esi-sba.dz · linkedin.com/in/mohamed-nadjib-taleb · github.com/N4dj1b · Algiers, Algeria

PROFILE

Cybersecurity Engineering student with hands-on experience in IT support, Windows and Linux infrastructure, network administration, and technical troubleshooting. Experienced in providing direct client support for workstation, software, account, email, firewall, and network connectivity issues. Practical experience administering firewall infrastructure, troubleshooting LAN environments, monitoring security events, and supporting virtualized systems. Knowledge of Windows Server, Active Directory fundamentals, DNS, DHCP, and PowerShell, with an interest in enterprise systems administration, identity management, and infrastructure security. Comfortable communicating in French and English.

TECHNICAL SKILLS

Windows & Systems Administration: Windows, Windows Server fundamentals, Active Directory fundamentals, User Account Administration, Linux, Microsoft 365, Outlook, Teams, System Configuration, Troubleshooting, Infrastructure Monitoring

Networking & Infrastructure: TCP/IP, DNS, DHCP, LAN/WAN, VPN, Routing, NAT, Firewall Administration, Network Segmentation, VMware ESXi, XCP-ng, Proxmox VE

Identity & Infrastructure Security: Active Directory Security Fundamentals, Access Control, Privileged Access Concepts, Infrastructure Hardening, Vulnerability Assessment, Security Auditing, Log Analysis

Scripting & Automation: PowerShell, Python, Bash, SQL, Git

Monitoring & Security Operations: Wazuh, Elasticsearch, Suricata IDS, Grafana, Wireshark, Network Traffic Analysis, Security Event Monitoring, Incident Investigation

Platforms & Tools: Docker, PostgreSQL, Microsoft Windows Administration, REST APIs

PROFESSIONAL EXPERIENCE

Hope Technology • *System Security Administrator | IT Infrastructure Support* Jul 2026 - Present

- Provided **direct, in-person technical support to clients**, diagnosing and troubleshooting **hardware, software, Windows workstation, user account, email and network connectivity issues**.
- Assisted clients with **firewall-related and network access issues**, investigating connectivity problems and supporting technical resolution.
- Administered and monitored **Linux and Windows infrastructure** across **LAN/DMZ environments**, supporting system availability and day-to-day operations.
- Configured and maintained **Sophos, pfSense and OPNsense firewalls,** including **routing, NAT, filtering, VPN access and network segmentation**.
- Monitored and investigated **Suricata IDS alerts**, analyzed suspicious network activity and tuned detection rules.
- Performed **network and infrastructure security assessments**, identifying exposed services, vulnerabilities and potential attack paths.
- Supported **infrastructure hardening and vulnerability remediation** across Linux and Windows systems, documenting findings and remediation activities.
- Worked with **XCP-ng and VMware virtualization environments**, including virtual networking and infrastructure configuration.
- Contributed to infrastructure design involving **Proxmox VE, Ceph, multi-site networking** and separated production, storage and administration networks.

Cybears • *Full Stack Web Developer - Cybersecurity Awareness Platform* Jul 2025 - Sep 2025

- Co-developed a cybersecurity awareness platform supporting user enrollment, phishing-awareness activities, progress tracking, and security education.
- Implemented backend services using Django REST Framework and PostgreSQL, including API endpoints and database operations.
- Developed frontend components using Next.js and TailwindCSS, contributing to a 20% improvement in Largest Contentful Paint (LCP).
- Collaborated on application deployment, debugging, and technical integration across frontend and backend components.

PROJECTS

IDS Alert Visualization and Rule-Based Detection • *Personal Project* · October 2026

- Analyzed 2,900 simulated IDS alerts using time-series visualizations, signature-by-hour heatmaps, and source-volume versus severity comparisons.
- Implemented and compared a rule-based exploit-burst detector with a volume-only baseline using simulated attack and normal scenarios.
  Repository: https://github.com/N4dj1b/ids-alerts-visualization

UNSW-NB15 Intrusion Detection • *Personal Project* · *Scikit-learn* October 2026

- Built preprocessing and classification workflows comparing Logistic Regression and Random Forest for multiclass attack classification and binary detection tasks.
- Evaluated performance using precision, recall, F1-score, ROC-AUC, classification reports, and confusion matrices. Random Forest achieved approximately 0.86 accuracy, 0.85 macro-F1, and 0.98 ROC-AUC on the binary benchmark test split.
- Investigated class imbalance and the effects of class weighting on minority-class precision and recall.
  Repository: https://github.com/N4dj1b/unsw-nb15-intrusion-detection

Virelia • *Technical Project* · *Co-Lead Developer* Apr 2026 - Present

- Co-developed a **Python-based web security assessment tool** for reconnaissance, technology fingerprinting, WAF detection, and automated OWASP Top 10 testing.
- Built automated security reporting and a controlled vulnerable lab for reproducing, validating, and documenting security findings.
- Designed a modular scanning pipeline with CLI orchestration, persistent reconnaissance data, scheduled security jobs, and extensible plugins.
- Collaborated in an open-source security research project with 4 contributors.
  Repository: github.com/yassertioursi/virelia

Restona • *Startup Project* · *Full-Stack Developer* Mar 2025 - Sep 2025

- Built a full-stack restaurant management platform integrating waiter, chef, customer, and delivery workflows.
- Engineered secure backend REST APIs with Express.js & PostgreSQL, incorporating role-based access control (RBAC).
- Collaborated on system design, deployment, and performance tuning for production-grade scalability.

EXTRACURRICULAR ACTIVITIES

CTF Competitor · @Vuln3ra *2025 - Present*

- **3rd Place - FENNEC CTF 2026**
- Compete in challenges covering **web exploitation, binary exploitation, and reverse engineering**.
- Practice vulnerability discovery, exploitation, and adversarial problem-solving in controlled environments.

Technical Team · @Shellmates Club *ESI (ex INI), Algiers*

- Create CTF challenges and participate in offensive and defensive security activities.
- Organize security workshops and contribute to peer learning around cybersecurity techniques.

EDUCATION & CERTIFICATIONS

Engineering & Master's Degree in Computer Science - Cybersecurity

- *Higher School of Computer Science Sidi Bel Abbes, ESI-SBA · Final Year · Expected 2027*

Fundamentals of Deep Learning

- *NVIDIA Deep Learning Institute (DLI)*

Certified Network Security Practitioner

- *The SecOPS Group*

Offensive Hacking Certification

- *ComproAvi*

Back-End Development Certification

- *Jonas Schmedtmann*
